-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-28 and 46-48, drawn to a method of detecting one or more polypeptides in a sample, classified in class 435, subclass 7.1.
  - II. Claims 29-42, drawn to an integrated system, classified in class 436, subclass 518.
  - III. Claims 43-45, drawn to a combination, classified in class 435, subclass 89.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product such as a method for studying posttranslational modifications of proteins.
3. Inventions I and III are independent and distinct inventions. Invention III requires a sequence of nucleotide encoding a signature protein in the genome and a list denoting the protein displayed on each phage and corresponding signature protein and invention I does not require these limitations.

Art Unit: 1641

4. Inventions II and III are independent and distinct inventions. Invention II is an integrated system comprising a solid support comprising polypeptides. Invention III does not require this solid support or polypeptides. Invention III requires a sequence of nucleotides encoding a signature protein in the genome and Invention II does not require this limitation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for one group is not required for other restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
